

There are many factors that affect how students learn math. A stigma regarding mathematics exists among many students and they usually have a negative thought process regarding the subject. Often times, students have already come to the conclusion that they do not have an aptitude for math before they attend the first class. It is necessary for students to feel a sense of confidence towards mathematics so that they can succeed. This confidence can be achieved by using different innovative methods to make learning math enjoyable. To enforce learning, one must also be approachable and patient in order for the student to feel at ease. Students should feel comfortable and confident in themselves in order to learn. A teacher who is able to instill the words demonstrated in the picture is one who sets their students up for success and gives them the tools that they require to become great math students.
